

# Biogeography of *Isolepis Fluitantes*

J Viljoen, AM Muasya,  
TA Hedderon, CS Bjorå

Natural History Museum  
University of Oslo

Thanks to:

Stuart Hall, Bolus Herbarium, Tony Verboom, Jasper Slingsby; NRF, UCT, University of Oslo

# Affinities of the Cape flora

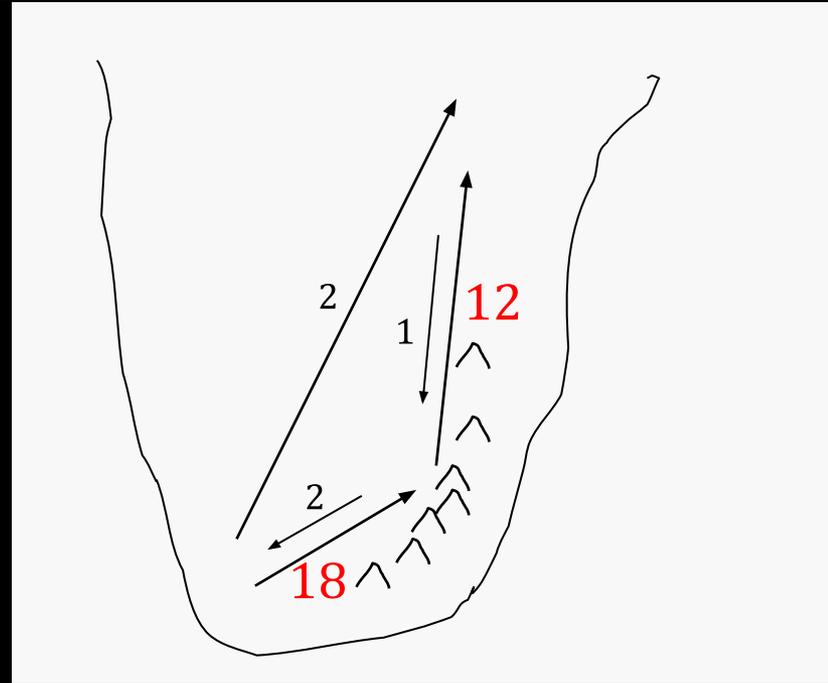

CFR and Tropical Africa:  
Northward migration over the  
Drakensberg

e.g. *Irideae*, *Pentaschistis*

(Galley et al., 2007)

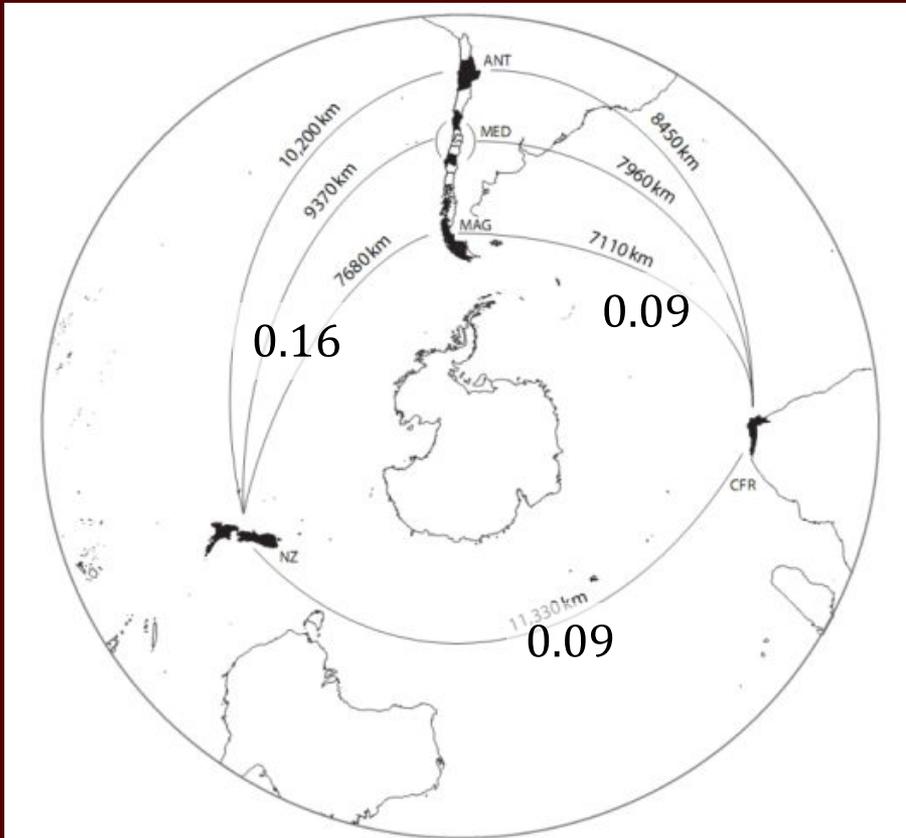

Some tropical taxa from Eurasia  
e.g. *Arabis*, *Carex*, *Ranunculus*

(Koch et al., 2006; Gehrke & Linder,  
2009)

data from Galley et al., 2007

# Affinities of the Cape flora

adapted from Moreira-Muñoz, 2007

Circum-antarctic:

Dispersal by

wind (Muñoz et al., 2004)

West Wind Drift (Waters & Roy, 2004)

water birds

Mostly not Gondwanan  
(Linder, 2005)

Africa to Australasia:

e.g. *Lepidium*, Gnaphalieae

Australasia to Africa:

e.g. Ehrharteae, *Tetraria*

(Bergh & Linder, 2009)

# *Fluitantes*

*Fluitantes*: CFR,  
African mountains,  
Europe, S–SE Asia,  
Australasia

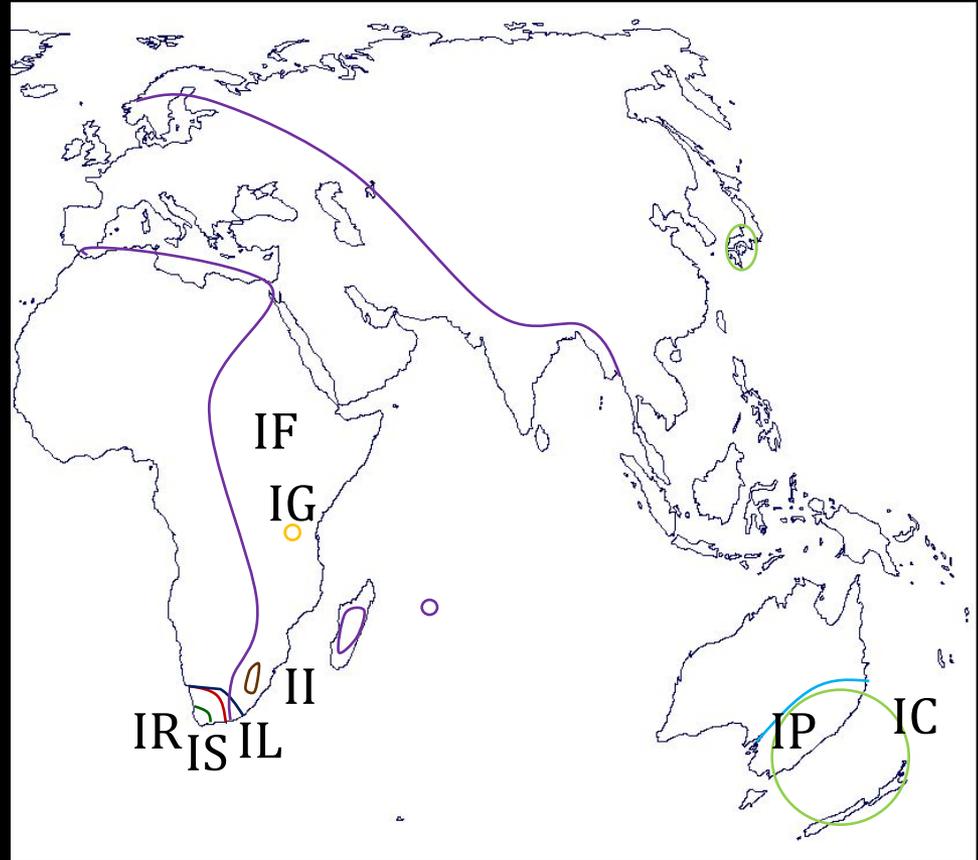

*fluitans striata*

*graminoides rubicunda*

*inyangensis producta*

*ludwigii crassiuscula*

(Muasya & Simpson, 2002)

# Methods

- Sequencing
  - ITS, *atpI–H*
  - 3+ populations per species
- Phylogeny: MrBayes
- Dating: BEAST
- Ancestral area reconstruction: Mesquite

# Dispersal to Australasia

- Long-distance dispersal event
- Hybridization with *Proliferae*?
- Subsequent speciation in situ?

# Dispersal through Africa

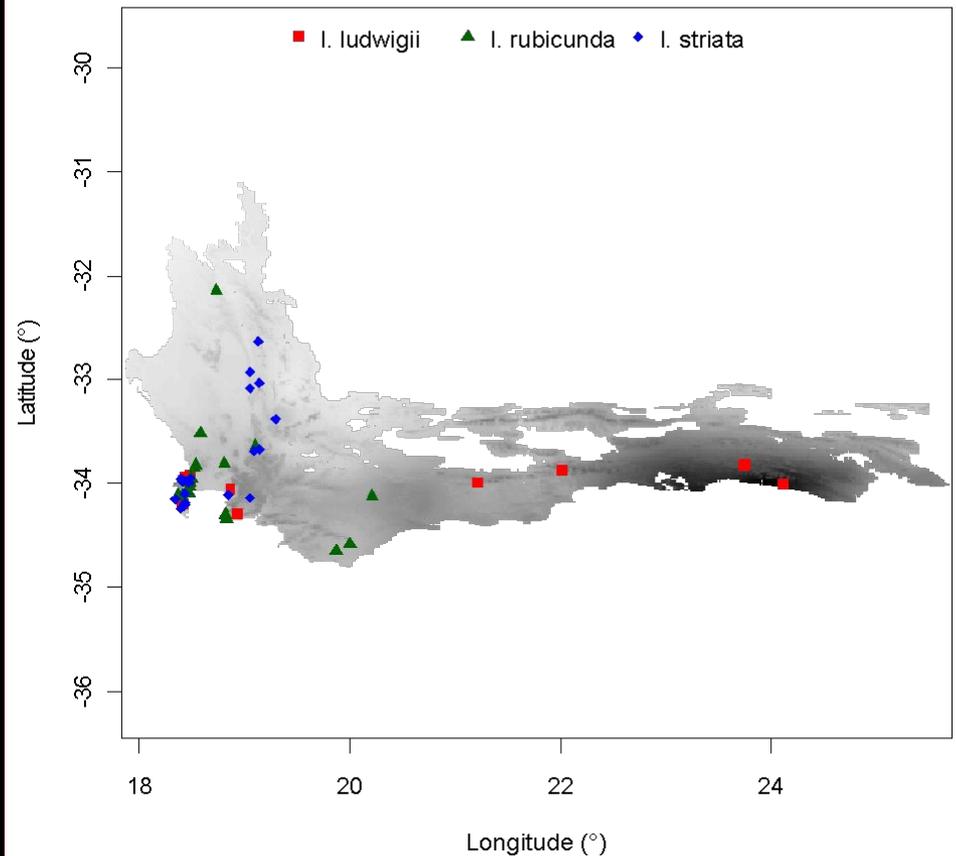

- Congruent with other CFR elements  
(Galley et al., 2007)
- Broad-scale niche conservatism  
(Wiens & Graham, 2005)
- Island colonization

# Diversification in the CFR

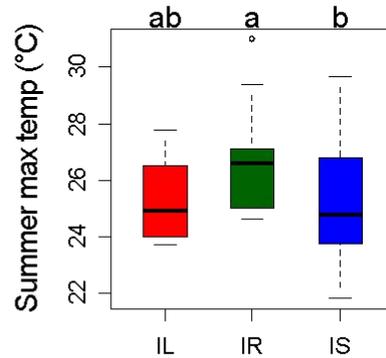

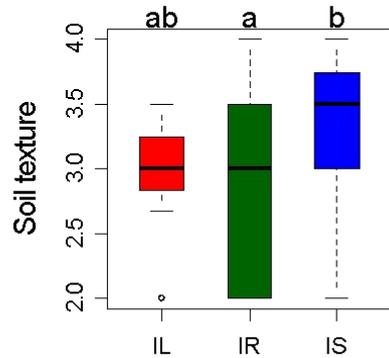

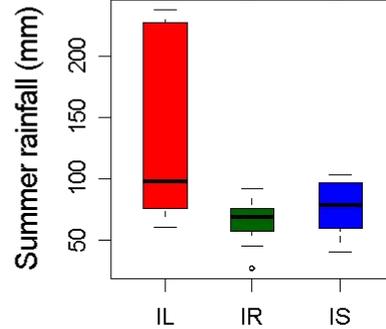

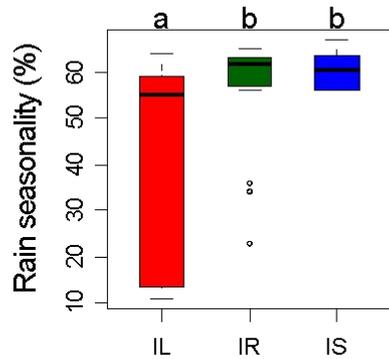

- Topographical complexity (Cowling et al., 2008) and tectonic stability
- Soil, pollinator specificity (Linder, 2003, 2005; van der Niet & Johnson, 2009)

# Habitat inference

- Georeferences from Bolus specimens
- Habitat data from GIS layers:
  - climate (Hijmans et al., 2005)
  - radiation (Slingsby unpub.)
  - soil (Gelfand et al., 2003)
- ANOVA
- DFA

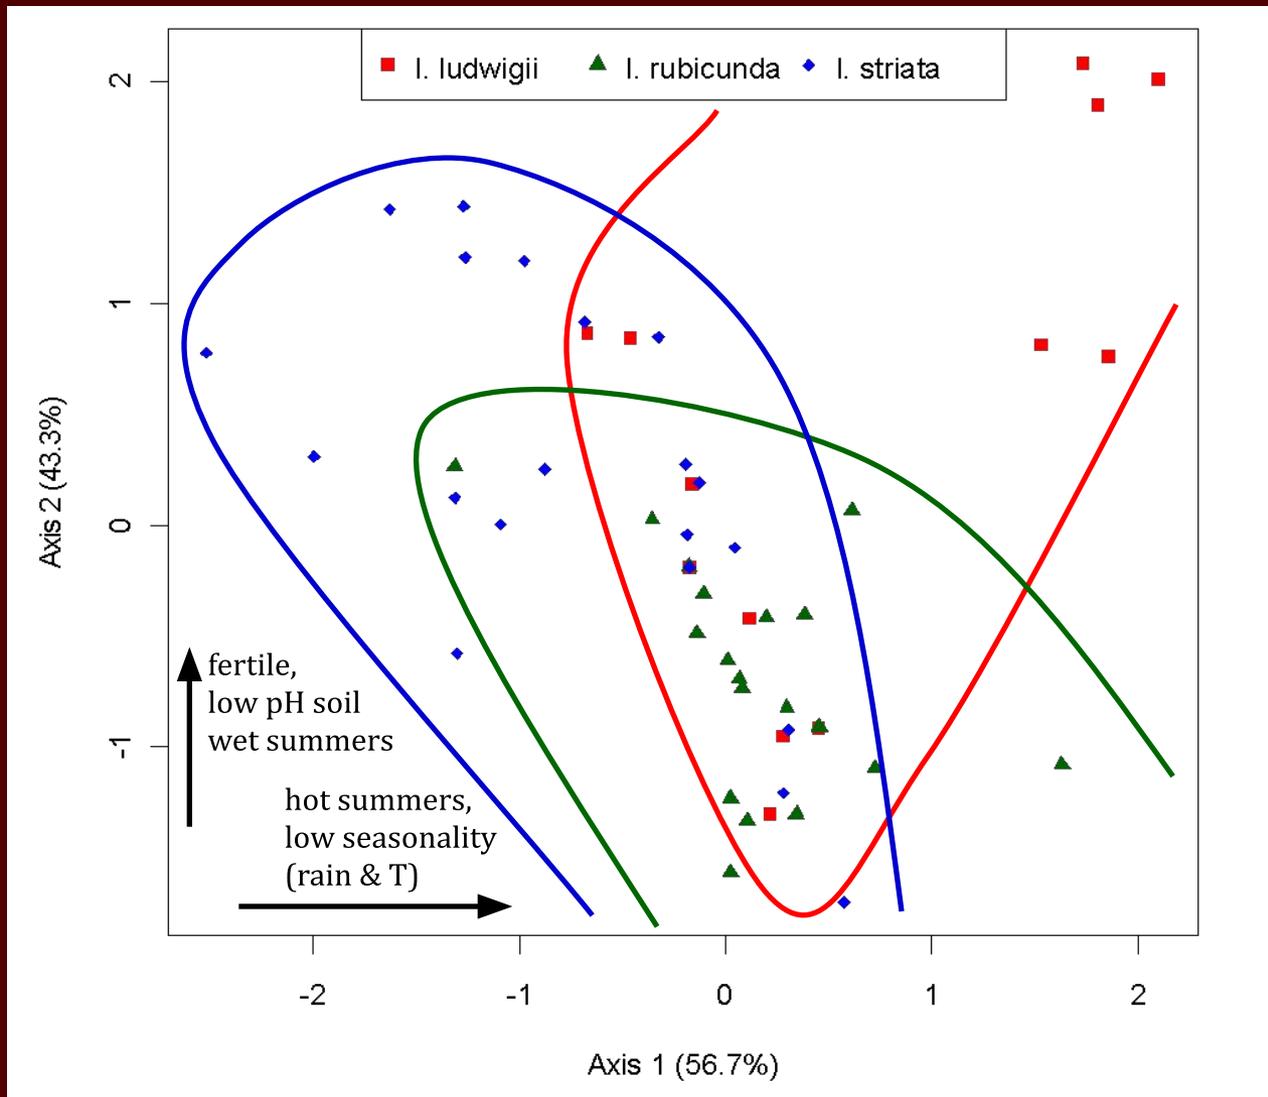

# Habitat divergence

Variable	<i>F</i>	<i>P</i>
Soil fertility	1.51	ns
Soil texture	2.99	0.06
Soil pH	2.33	ns
Solar radiation (Jan)	0.53	ns
Temp seasonality	1.68	ns
Summer max temp	3.13	0.05
Rainfall seasonality	13.37	<0.001
Summer rainfall	11.46	<0.001

# Habitat divergence

# Diversification in the CFR

- Cannot test for mode of speciation
- Little habitat differentiation at  $\sim 1 \text{ km}^2$
- Microhabitat differentiation
  - Relevant plant characteristics still unknown
- Other isolating mechanisms?
